2.0 Methodology for Evaluation of Bids:

- 2.1 *BCPL will evaluate and compare the Price bids of the techno-commercially qualified bidders whose bids are previously determined to be substantially responsive pursuant to "ITB: Clause-29".*
- 2.2 *For the purpose of evaluation of bid and arriving at the L1 bidder, the total value of SOR on overall basis shall be considered excluding GST.*
- 2.3 *If a Startup company [whether Micro & Small Enterprises (MSEs) or otherwise] as a bidder gets qualified without any prior experience & turnover criteria as mentioned above and emerges as lowest evaluated bidder (L1), the LOA / Order on such Startup shall be placed for entire tendered quantity.
[However, EIC's of that contract shall draw monthly milestones / check points during the Kickoff Meeting and shall review the performance more carefully and take action as per provision of contract in case of failure / poor performance.]*
- 2.4 *In case of a **tie** at the lowest bid (L1) position between two or more Startup / non-Startup bidders, then LOA / Order shall be placed on the bidder who has higher / highest turnover in last audited financial year, **2018-2019**. In case the audited financial results of FY: 2018-2019 are not available, then annual turnover of **FY: 2017-2018** will be considered for comparison purpose for that bidder.*
- 2.5 *In case, there is a **tie** at the lowest bid (L1) position between only Startup bidders and none of them has past turnover, the LOA / Order shall be placed on the Startup who is having highest working capital as compared to other(s).*

2.7 *Startups are exempted from submission of EMD.*

2.8 *CPBG: The following CPBG clauses, either of two shall be applicable*

*The contract performance security shall be **10% of annualized Basic Contract Value** (without GST therein) towards faithful performance of the contractual obligations and must be valid for **03 (Three) months** beyond the contract period. For the purpose of Contract Performance Security, Contract/order value shall be exclusive of GST. Details as per ITB of Tender document.*

In case more than one MSE bidder(s) quoting within the price band of L1+15% and tender item is non-divisible, then in such case, the MSE bidder(s) shall be asked to match the price of L1 bidder sequentially in the order of L2, L3, L4 & so on. In case of tie, the MSE bidder having highest turnover as per last audited financial year i.e. **2018-2019** shall be awarded subject to matching of L1 price. 5.5.1 Half yearly PM for package AC above 9.0 TR and Annual PM for package AC up to 9 TR:

1. **Clean air filters:** A dirty filter can reduce the plant capacity. More the dirt accumulation on the air filter, greater will be the reduction in capacity of the plant. Air filters, if not cleaned regularly will get saturated with dirt and thereafter dirt will pass on to the cooling coil fins, which will affect plant capacity much more and in extreme cases can even lead to liquid flood back to the compressor, which is highly injurious to the compressor. Cooling coils being wet, this dirt/dust will form a crust on the coil. Hence, air filters are to be cleaned regularly. Weekly cleaning has been suggested; but where the plants are installed in dust environments, it may be necessary to clean the filters more often. Air filters should be changed, when it is found that cleaning does not remove all the dust.
2. **Leak testing for refrigerant leak:** A halide torch should be used to locate the leaks. Now electronic leak detectors are available. While leak testing, the approach should be to find a leak rather than taking it for granted that there won't be any leak and doing the

ब्रह्मपुत्र क्रेकर और पॉलिमर लिमिटेड BRAHMAPUTRA CRACKER AND POLYMER LIMITED

(भारत सरकार का उपक्रम) / (A Government of India Enterprise)

work of leak test as ritual. Even a minor leakage can lead to lot of problems, such as poor oil return, heating of compressor apart from poor cooling. Further refrigerant is costly and so less leak/no leak becomes a big cost saving centre in the operation of the plant.

3. Check the condensate tray and drain for dirt or moisture build up-clean as necessary. Ensure that condensate drains completely from the tray, drain is not blocked.
4. Check for voltage, current, and earthing.
5. Functionality of pressure gauges and thermometers needs to be checked.
6. Analyze the pressure and temperature readings of the unit from the log book and establish that the unit is working satisfactorily. Corrective action should be taken promptly when reading shows even a minor malfunction.
7. Contractor shall maintain records and log-sheets in the format specified by Engineer- in-charge. Contractor shall submit the progress report scheduled as indicated by EIC.

5.5.2 Complete Overhauling Schedule:

Checks to be done during servicing:

1. Check various pressures, temperature and current and analyze the readings to ascertain the condition of the plant.
2. Ensure that the oil return is proper.
3. Carry out a thorough test for refrigerant leak.
4. Inspect the cleanliness of the filters and replace them if necessary.
5. Check the operation of all safety and operating controls.
6. Check drains for free flow and clean when required.
7. Check for abnormal vibration and noise. Check for tightness of all fasteners.
8. Check cooling coil fins for dirt accumulation. Clean if required.
9. Check fan motor and its connector for proper wiring.
10. Check fan and fan motor bearings. Repair/replace if necessary.
11. Cooling coil: The temperature difference between the canvas temperature and the evaporator, (or water leaving temperature) is the criteria to determine whether the coils require cleaning. Cooling coils are to be cleaned with water under pressure.
12. Lubricate all moving parts.
13. Changing compressor oil if required.
14. Check HP/LP switch for function.
15. Check all sensors (Temp./Pressure etc.)
16. Checking the valve plate assemblies and un-loader assemblies.

21. Shut down interlocks checking.
22. Any other operation not included but required for efficient operation and maintenance of plant.
23. Besides above, the contractor shall attend to all breakdown maintenance jobs promptly. Cold insulation removal and rectification/replacement will be in the scope of the contractor.
